

2021 to 2024

Q10052208 - The Gigabyte Z390 DESIGNWARE M/B can not launch the ARC-1886 McBIOS RAID configuration utility message during the start-up sequence (after the system BIOS startup screen but before the operating system boots).

Select the **Del** tab from the Z390 DESIGNWARE startup screen to enter the **Advanced Mode** setupscreen. Select **CSM Support** items in the **Boot** option of the screen to go to enable the Compatibility Support Module configuration. The "Storage Boot Option Control" allows user to select whether to enable the UEFI or legacy option ROM for the storage device controller. This item is configurable only when CSM Support is set to "Enabled". Please change the "Storage Boot Option Control" setting from "UEFI" to "Legacy".

Unique solution ID: #2002
