**Q10011405 - ARC-1214 reports that
ST4000VN000 Current SATA Mode is
SATA150+NCQ (Depth32) but not SATA600+NCQ
(Depth32).**

Seagate ST4000VN000 6G SATA drive SC44 firmware manufacture current allowance speed default set on 1.5Gb/s even its capability=6Gb/s. This issue can be solved by manually configuring drives to SATA 6G mode by 'Seagate SATA HDD Speed=6G' function on the Advanced Configuration.

Unique solution ID: #1123
