

2012

Q10011208 - Supermicro X8DTN+-F motherboard with BIOS version 2.1c, we try to install Centos/RedHat 6.2 on this M/B that uses one Areca RAID Card (ARC-1882). CentOS 6.2 still shows 'no usable disks' in anaconda.

It has fixed by the ARC-1882 bootcode date: 2012-04-20 or later. You can try to disable the ASPM feature in Linux loader to see if the situation is changed.

Unique solution ID: #1350
