

2012

Q10021211 - Is it possible to insert a larger DIMM on ARC-1882ix-16 PCIe 2.0 SAS controller, such as 16 GB. I am using a large number of small files and am looking to maximise I/O on the card.

ARC-1882ix series controllers can support up to 2Rx8 unbuffered 8GB module cache running speed at DDR3-1200.

Unique solution ID: #1358
