

2014

Q10021108 - I recently purchased an ARC-1880ix-24 card. I have read in several places on your website that there is a Disk Stress Test that can be run from the SAP utility. Apparently it is a hidden option. How do I access DST and why is it hidden?

The DST feature is not a hidden option; it uses SMART command for drive testing. The DST feature works with SATA controller only not SAS controllers.

Unique solution ID: #1418
