2012 to 2013

Q10021012 - We are interested in a big project with ARC-1300ix-16. Do you have any idea of how to "turn-on" the lights of a bad drive by the SGPIO/SES2 under Linux environment?

There has an utility called “sg3utility” which is a SES2 management software. You should be able to send SES2 commands to SES2 devices through this software.

Unique solution ID: #1464
