

**2011**

**Q10031012 - We have successfully installed the areca driver for VMware, and can use it as datapool. But how can I monitor the state of the RAID-Pool? How do we get informed about broken disks?**

There are McRAID drivers embedded in ESXi Server 3.5 and 4.0 but there is McRAID manager ( Archttp proxy server) or CLI available from Areca.
