Q80011907 - What's command to download macOS system log at /var/log/messages?

You can use below command to download the system log.

A screenshot of a macOS terminal window. The title bar shows 'tsd - -bash - 153x24'. The terminal content shows the command 'cp /var/log/system.log ~/Desktop/' being entered and executed, followed by a new prompt line.

```
[xserv5:~ tsd$ cp /var/log/system.log ~/Desktop/  
xserv5:~ tsd$
```
