Q80011911 - Does ARC-8050T3U RAID storage have any issue with Gigabyte Z390 Designare M/B?

ARC-8050T3U RAID storage is based on the Intel Thunderbolt TitanRidge JHL7440 Controller. But it has issue with Gigabyte Z390 Designare M/B that is based on Intel Thunderbolt TitanRidge JHL7440 Controller using NVM firmware version 33. There has no issue from similar ASUS product PRIME X299-DELUXE II using NVM firmware version 35.

Gigabyte Z390 Designare can work with ARC-8050T3U RAID storage from engineering version number "B".

Unique solution ID: #1878
