

2013

Q80011310 - I have 4x4TB drives on ARC-8050 and setup the Array via the config webpage as RAID5 giving me 10TB overall space. I am running OSX 10.8.5 and only showing the RAID as a 2TB drive.

When you create the volume, you have to enable the over 2TB support to be able to create a volume with over 2TB capacity. The volume capacity will be limited with 2199GB without enable this setting.

Unique solution ID: #1321
